The products were purified by phenol/chloroform and Centricon 100. The CDNAs were digested with Sal1 and NotI enzymes and cloned into Sal1/NotI site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulan Piao (NIA)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HTG; HTGS_PHASE1; HTGS_DRAFT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AC021449.3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as
                                                                                                                                                                                                                                                                                                                                          arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (bases 1 to 143079)

**NOTE: This is a 'working draft' sequence. It currently
**consists of 7 contigs caps between the contigs
**are represented as runs of N. The order of the pieces
**is believed to be correct as given, however the sizes
**of the gaps between them are based on estimates that have
**provided by the submittor.
**This sequence will be replaced
**by the finished sequence as soon as it is available and
**the accession number will be preserved.

* NOTE: This is a "working draft' sequence. It currently

* consists of 47 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

                                                                                                                                                                                          The chicken CHD-W gene (AAT42754) acting alone or in conjunction wit the closely related CHD-1A gene (AAT42751) is suggested to initiate female development in birds. The sequence of CDH-W was deduced from 2 clones isolated from a 10-day chick embryo library using a fragment of the CHD-1A gene as a probe. The CHD-W gene is located on the W chromosome. Probes based on CHD-W and CHD-1A give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-W nucleic acids can also be used to control the sex of progeny of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The chicken CHD-W gene (AAT42754) acting alone or in conjunction with the closely related CHD-1A gene (AAT42751) is suggested to initiate female development in birds. The sequence of CDH-1A was deduced from 3 clones isolated from a stage 10-12 chicken embryo cDNA library using a great tit CHD-W sequence (see also AAT42755) as probe. The CHD-1A (A = Avian) gene shows close identity to the mouse CHD-1 gene (see also AAT42756-57). It is located on an autosome or Z chromosome. Probes based on CHD-W and CHD-1A give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-1A nucleic acids can also be used to control the sex of the progeny of a bird.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Avian chromodomain-helicase-DNA binding genes determine sex

                                                                                                                               The altered vertebrate telomere repeat binding protein (A-TRF) has a telomere repeat binding factor (TRF) dimerisation domain, and forms a hetero-dimer with TRF, preventing it from binding to the specified repeat sequence. A-TRF, optionally expressed by gene therapy, is used to inhibit shortening of telomeres associated with ageing (for cosmetic purposes) and disease, e.g. ataxia telangeictasia, Down's syndrome, atrophy of the skin, age-related macular degeneration, atheroscierosis, tumours and viral (including human immune deficiency virus) infection. Cells expression of recombinant proteins or where intended for subsequent transplant or for testing, eliminating the need for transformation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4080 ATTTTACCTGATGATCCAGACAAGAAACCCCAGGCAAAGCAGCTACAGAC 4129

                                                                                                                                                                                                                                                Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (AAT42759) and and the great tit CHD-W gene (AAT42759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42754-55) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.
                                                                                                                                                                                                  Sequence 153 BP; 60 A; 33 C; 31 G; 29 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 8; Fig 3; 76pp; English.

                                                                                                                    Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (see also AAT42758) and the great tit CHD-W gene (see also AAT42759). Translated amino acid sequences of this region are provided in AAW88146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT4275-5) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.

                                                                                                                   Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (AAT47758) and and the great tit CHD-W gene (AAT42759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42755) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.

                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and inequivalent cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG10511), expressed DNA sequences (ABLIG1640-ABLIG1615) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        102 ATTACTG 108
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; SEQ ID NO 13811; 21pp + Sequence Listing; English.

The inventiuseful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLJ6176-ABLJ6171), expressed DNA sequences (ABLJ1840-ABLJ6175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 9933 BP; 2711 A; 2468 C; 2538 G; 2216 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The polynucleotide sequences given in AAC99818 to AAC99977 encode the CC human secreted proteins given in AAB50362. Human secreted CC proteins have activities based on the tissues and cells the genes are CC expressed in. Examples of activities include: immunosuppressive; cardiant; CC vasotropic; cerebroprotective; antiproliferative; cytostatic; cardiant; CC virucide; fungicide; and opthalmalogical. The human secreted CC polynucleotides and proteins can be used to prevent, treat or ameliorate CC a medical condition in e.g. humans mice, rabbits, goats, horses, cats, CC dogs, chickens or sheep. They are also used in diagnosing a pathological CC condition or susceptibility to a pathological condition. Disorders which CC are diagnosed or treated include autoimmune diseases e.g. rhematoid CC arthritis, hyperproliferative disorders e.g. neoplasms of the breast or CC liver, cardiovascular disorders e.g. cardiac arcest, cerebrovascular CC disorders e.g. cerebral ischemia analogenesis, nervous system disorders c.g. arthritis, hyperproliferative disorders e.g. cardiac arcest, cerebrovascular CC disorders e.g. cerebral ischemia analogenesis, nervous system disorders c.g. arthritis, hyperproliferative disorders e.g. cardiac arcest, cerebrovascular CC disorders e.g. cerebral ischemia analogenesis, nervous system disorders c.g. arthritis, hyperproliferative disorders e.g. cardiac arcest, viruses and CC transplantation, for supporting cell culture of primary tissues, to compania thin, for supporting cell culture of primary tissues, to capabilities. AAC99009 to AAC99817 and AAS56076 represent sequences used CC capabilities. AAC99009 to AAC99817 and AAS56076 represent sequences used CC in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqn-emb1/NA2001B.DAT:AAS96223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     alignment_scores
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Quality: 8.00

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynucleotides encoding bone marrow CC tissue polypeptides. The sequences of the invention can be used in the CC treatment of central nervous system disorders such as Parkinson's CC disease, Alzheimer's disease, Huntington's disorders and amyotrophic CC lateral sclerosis, peripheral nervous system disorders such as peripheral CC neuropathy, haematopoiesis, myeloid and lymphoid cell disorders, periodontal CC disease, cerebrovascular disorders such as stroke, viral infections, disease, cerebrovascular disorders such as stroke, viral infections, activities, bone degenerative disorders, periodontal CC disease, cerebrovascular infections, autoimmune disorders such as CC rheumatoid arthitis, multiple sclerosis, asthma and eczema, inflammatory CC disorders such as Crohn's disease and nephritis, hyperpoilferative CC disorders such as Crohn's disease and nephritis, hyperpoilferative CC covary, kidney, brain and skin). The sequences, depression and cancer (e.g. tumours of the stomach, colon, pancreas, liver, bladder, prostate, CC ovary, kidney, brain and skin). The sequences are also useful in bone, cartilage, tendon, ligament and/or nerve tissue growth or regeneration and healing of wounds, burns, incisions and ulcers. Sequences as assigned to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Align seg 1/1 to: AAS96223

                                                                                                                                                                                                                                                                                                                                                                                                  amyloid precursor protein (APP) to beta-amyloid, and also in cleavage of other membrane proteins such as Notch (implicated in development of the nervous system). *Terminal signal peptides: C-terminal propeptides; generation of peptides for presentation in the context of major histocompatibility complex molecules, and cleavage of the endoplasmic reticulum stress sensor protein Irel. (1), also nucleic acid (II) that encodes it, and its inhibitors and antibodies (Ab) are used to treat or diagnose diseases that are associated with cleavage of amyloid precursor protein, especially Alzheimer's disease, aberrant breakdown of hydrophobic signal peptides, or accumulation of unfolded proteins in the endoplasmic reticulum. They can also be used to modify presentation of hydrophobic peptides by histocompatibility complex molecules, in cases of e.g. viral infection, cancer and transplant rejection. This sequence method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel protease (I) that has two aspartate residues in a catalytically active structure. The aspartate residues are present in motifs of formulae X_1GX_2GD and X_3X_4DX_5 both present in a transmembrane region. The products of the invention have neuroprotective and nootropic activity. (I) represent the previously unidentified gamma-secretase activity that is involved in conversion of

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression by rectifying mutations or deletions in a patient's genome
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic related diseases, especially
CC concers and cancer metastases of haematopoietic antigen genomic
CC sequences from the present invention. AAK54921 to AAK8793 and AAW82169
CC represent sequences used in the exemplification of the present invention.
